Powering Drone Operations for First Responders

- Know where it's safe to fly
- Deploy pilots safely in volatile situations
- Track & report evidentiary flight information
- Quickly log operations with multiple flights

How Skyward Fits Into Your Operations

Plan
Avoid restricted airspace & mark hazards with Skyward's interactive airspace map

Deploy
Use Skyward's mobile app to access flight info & airspace & weather alerts

Record
Log flight records; track pilot & aircraft flight hours

Report
Maintain an audit trail & manage flight evidence

Know Where You're Allowed to Fly

Deploy quickly with Skyward's simple & powerful flight planning tools.

- Accurate, up-to-date global drone airspace map
- Physical & street layers; VFR in the United States
- Collaborate with your crew and mark areas of operation & hazards
- Guidance on how to access complex airspace

- Create a flight plan & maintain comprehensive flight records
- View current and upcoming temporary flight restriction
- Eliminate on-site confusion
- Measure distance & radial direction

Drone Essentials for Emergency Services

1. Follow Airspace Regulations

Skyward's up-to-date global airspace map makes it easy.
View controlled airspace, temporary flight restrictions,
and guidance for accessing complex airspace.

2. Keep Records for Evidentiary Support & Audits

A detailed audit trail improves traceability and transparency
in your operations. Skyward is a single, centralized source
for all your flight records.

3. Manage Public Perception

Support a positive relationship with your community.
Follow regional airspace regulations, display your pilots'
professionalism, ask for permission to operate over private
property, and publicize your achievements.

4. FAA Airspace Permission - Waivers or LAANC

Use Skyward to obtain access to controlled airspace in just seconds. First
responders can also apply for a waiver from the FAA to gain long-term access
to controlled airspace and to operate near airports, at night, or over crowds
or riots. Visit Skyward.io/LAANC for more information.

5. Use Skyward to Manage Operations

Skyward's comprehensive management system scales with you as
your operations expand. Skyward can help you manage all your records,
people, processes, and equipment. You'll get into the air faster, fly safer,
and maintain a complete record of your flight operations.
